Subject: Sexual Boundaries

Need really clear guidelines for rural Doctors.

At present if you are a single rural Doctor, you cant go out with anyone in town , because they are almost all your patients.

Needs to be clear guidelines for rural Doctors, if you want to go out with someone what you need to do.

Personally I think saying that you can no longer look after someone and they will need to see another doctor if you are going to go out is fine. Otherwise we are really making rural medicine an impossibility for single doctors.
