MEDICAL BOARD OF AUSTRALIA

 $20^{\text{TH}}$  September, 2013.

LETTER OF COMPLAINT

<u>Re: Medical Professionals are looking more like Quacks and the</u> medical profession Quackery.

—

We wish to bring to your attention that the public in general is losing trust through the actions of some of your registered medical professionals.

The community places a great deal of trust in doctors and the wider medical profession and this is why their integrity is considered sacrosanct and held with the highest esteem. Patients rely on the independence and trustworthiness of doctors for any advice or treatment offered which is why the many voices being heard via the social media, newspaper articles and radio and TV interviews Australia.

Over the past few years many medical professionals have become involved in endorsing therapeutic treatments to the general public through all mediums of the media. This is seen as unprofessional and unethical to the general public. These professionals are breaching ethical policy and <u>conducting</u> medical trespass.

The Therapeutic Goods Administration (TGA) include fluorides used for water fluoridation under the TGA Act 1989, therapeutic goods (excluded goods) Order No.1 of 2011 Section 5 Item 10. "Substances for use in the purification of treatment of drinking water if no claims are made for therapeutic use" It has been the TGA's intention to regulate the above substances that made a therapeutic claim since 2002 (refer to FOI document 156-1213-19 released on 18<sup>th</sup> April, 2013 at <u>http://www.tga.gov.au/about /foi-documents-released-2012-</u> 2013.htm

Any therapeutic claims (eg. For the prevention of tooth decay) and any other such advertising claiming a therapeutic use (see definition below) **are not permitted** under the therapeutic goods advertising code 2007.

# "Therapeutic use is defined in the TGA 1989 as meaning use in or in connection with:

a) preventing, diagnosing, curing or alleviating a disease, ailment, defect or injury in persons or animals; or

b) influencing , inhibiting or modifying a physiological process in persons or animals."

### Professional behaviour - Professional boundaries:

"In professional life, doctors must display a standard of behaviour that warrants the trust and the respect of the community. This includes observing and practising the principles of ethical conduct.

2 Providing good care.

2.1.1 Assessing the patient, taking into account the history, the patient's views and an appropriate physical examination. The history includes relevant psychological, social and cultural aspects.

3.5 Informed consent. "Informed consent is a person's voluntary decision about medical care that is made with knowledge and understanding of the benefits and the risks involved.....

3.5.1 Providing information to patients in a way that they can understand before **asking for their consent**.

3.5.2 Obtaining of informed consent or other valid authority before you undertake any examination, investigation or provide treatment....."

#### 8.6 Advertising

8.6.3 Not guaranteeing cures exploiting patient's vulnerability or **fears** about their future health or **raising unrealistic expectation**.

Eg. Expectation to the therapeutic treatment he is promoting because in Tasmania this treatment has been in force since 1953 and dental decay rates are the highest in Australia therefore this therapeutic treatment is not a cure for dental decay as the decay of the second sec

#### COMMUNITY OBSERVATIONS:

## 1. Scaremongering and name calling

using fear tactics and name calling on the internet to promote the therapeutic treatment of "artificial water fluoridation". See attachment.

is

2.Medical Malpractice: .Using internet and other advertising media to promote therapeutic treatment to the public. Making a claim for therapeutic treatment stating no risk involved when he has not seen nor examined nor conducted any blood, tissue or urine samples to back up his "scientific" claims. He has not taken a patient's history, but is prescribing a therapeutic treatment via the media, bringing his profession into total disrepute by not observing ethical codes of conduct. He is engaging in further commentary on the internet blog randomly, showing further his unprofessionalism which is bringing in other professionals, (doctors, nurses ,dentists, etc). Do they not have patient's to attend to or other duties. Are they being paid to conduct this type of advertising on the internet as it would appear their comment is not kept to this one blog.

Media Release with community response to

See attachment

We would like to point out that this is not a witch hunt being carried out personally on these people who are mentioned, as we could elaborate and come up with many more instances where this has been applied eg.

We are concerned that this unprofessional behaviour takes us back 75 years when doctors were endorsing cigarette smoking improves digestion "it's smart to have Camels on the table." As you can see **this turns the medical profession into quackery** as the general public starts to lose trust in the conflicting

as the general public starts to lose trust in the conflicting medical opinions expressed by professionals.

We invite the medical profession to turn back to grassroots bedside manner where the individual patient is treated by his doctor and not generalised in the media.

If this kind of unprofessional behaviour continues you will see many patients turning away from their doctors and looking for alternative treatment for their medical problems. Doctors, Dentists, nurses and the extended medical community need to concentrate on doing their job treating their patients and stop making public statements and commentary in regard to people's healthcare. Healthcare is an individual personal issue which should be treated with respect as each individual may have chemical sensitivities or allergies which is why informed consent is an important right of any human being. We are seeing discrimination against people diagnosed with kidney disease; obesity; diabetes; skin problems; cancer, already compromised health issues; which should not be exposed to a so called cure for dental caries; "we are more than a set of walking teeth"

The therapeutic treatment of "artificial fluoridation" issue is very controversial nationally and internationally where countries like Israel (see attachment) are turning away from this archaic practice which disregards people's rights to choice and informed consent. The medical professionals cannot have it both ways.

Scenario: The doctor walks into his surgery on a winter's day with 50 patients waiting; does he walk into his waiting room and ask for a show of hands how many:

- have a cough
- have a sore throat
- running noses
- Etc.

"People with a cough are prescribed a broad spectrum antibiotic =Bacterim for all. Those with a sore throat - amoxycillin three times a day with food Those with running noses: panadol 2x4 times per day (no more than 8 per day) And the little children are to receive the same".

Nobody has had their history taken, their medications questionned and children and adults treated with the same dose, no matter what body weight or age.

This is the same scenario for artificial water fluoridation that some of your professionals are prescribing to the entire community. Can you understand why people are losing trust and belief in the medical profession.

We urge you for the sake of your profession to encourage your doctors, nurses, dentists et al to stop promoting therapeutic treatment of artificial water fluoridation to the general public as it is unethical to your profession. Without informed consent.

Yours sincerely, Anna Michalik & Sandra Camm
